

Series 240

Electric Control Valve Type 3241/3374 Globe Valve Type 3241

Electric Control Valve Type 3244/3374 Three-way Valve Type 3244

Application

Versatile control valves for industrial applications as well as for heating, ventilation and air-conditioning systems

DN 15 to DN 150 · PN 16 to PN 40 · Temperature range between -196 °C and +450 °C

Type 3244 Three-way Valve or Type 3241 Globe Valve with Type 3374 Electric Actuator

- Valve body made of:
 - Cast iron
 - Cast steel or
 - Cast stainless steel
 - Type 3241 also of spheroidal graphite iron or forged steel
- Undivided valve bonnet

The Type 3374 Electric Actuator is available in various versions (see Data Sheet T 8331 EN for details):

- With mechanical override
- With additional electrical equipment (limit switches, potentiometers, positioner)

Versions

Standard version for temperatures from -10 °C to +220 °C

- **Type 3241/3374** (Fig. 1) · Type 3241 Globe Valve with Type 3374 Electric Actuator
- **Type 3244/3374** (Fig. 2) · Type 3244 Three-way Valve with Type 3374 Electric Actuator

Further versions with

- **Insulating section** · See Technical data
- **Metal bellows seal** with backup packing · See Technical data
- **Heating jacket** · See Technical data

Also available

- Electric control valves with other electric actuators (see Data Sheets T 5874 EN, T 8340 EN and T 8331 EN)
- Pneumatic actuators (see Data Sheet T 8015 EN)
- Typetested versions (see Data Sheet T 5871 EN)

Fig. 1 · Type 3241/3374

Fig. 2 · Type 3244/3374

Principle of operation (Figs. 3 to 5)

The medium flows through the globe valve in the direction indicated by the arrow on the valve body.

The Type 3244 Three-way Valve is available for either mixing service (Fig. 4) or diverting service (Fig. 5). The valves cannot be modified to suit the other service type as the plug is welded to the plug stem.

To achieve the maximum flow rate in diverting valves in size DN 65 and larger, port AB-A can be designed for higher K_{VS} values than port AB-B (see Table 4).

Both valves can be equipped with a metal bellows seal or an insulating section to meet special requirements, for example, with vacuum applications, or with aggressive media or high temperatures.

Sizing and selection of the control valve

1. Calculate appropriate K_V coefficient according to DIN EN 60534.
2. Select valve size and K_{VS} coefficient from Table 2.
3. Determine permissible differential pressure Δp from Table 2.
4. Select suitable actuator from Data Sheet T 8331 EN, taking into account the thrust, travel, and transit time.
5. Select materials, pressure and temperature from Table 1, also taking into account the pressure-temperature diagram.
6. Optionally, select additional electrical equipment (refer to Data Sheet T 8331 EN for details).

Terms for control valve sizing according to DIN EN 60534, parts 2-1 and 2-2:

$$F_L = 0.95; \quad x_T = 0.75$$

Installation

The control valves can be installed in any desired position except with the actuator suspended downwards. The linear actuator is attached to the yoke with a fastening nut.
